Cover Letter

Dear Ms. Samjhawan,

I wish to apply for the position of *Mechatronics Designer - System Dynamics* - as advertised on Orion website.

I have several years of experience in modeling and developing mechatronic systems. In my current company I model and measure, among other tasks, frequency response of hydraulic components and design test benches to perform fatigue analysis on mechanical elements.

I like multidisciplinary environments and my background allows me to deal with problems that extend from mechanics to computer science. I also have a predilection for building models that describe how things work.

I believe that my skills and experience would make me a valuable asset for the company. I am excited about the opportunity of joining Orion and look forward to meeting you to discuss the position further. Thank you for taking the time to consider my credentials.

Sincerely yours,

Claudio Caccia
